kudimarket

One trade, seen from both sides.

KudiMarket holds a board with a cedi buyer on one side and a naira seller on the other, and sits in the middle of it as a counterparty in its own right. This is what that looks like on a phone: the seller's side, the buyer's side, and the record both of them end up trusting.

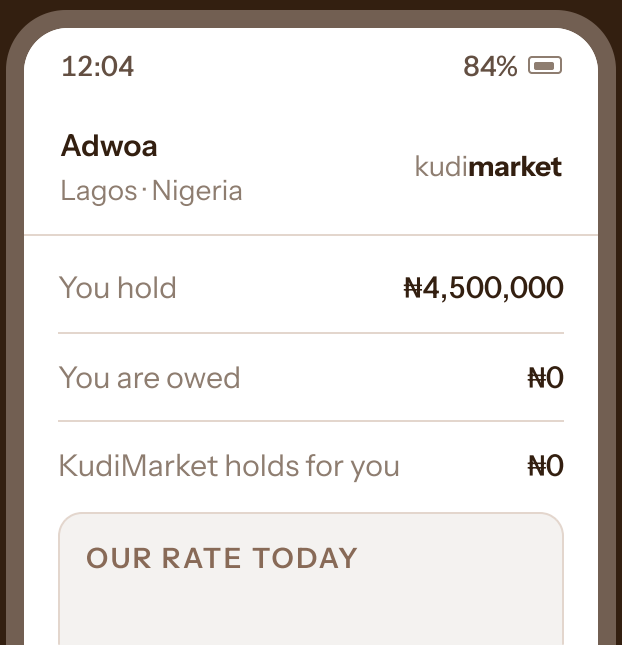

Every figure here is a working figure out of the ledger, not filler. Amounts, rates and the state changes come out of the same tables the operations console reads.

THE SELLER

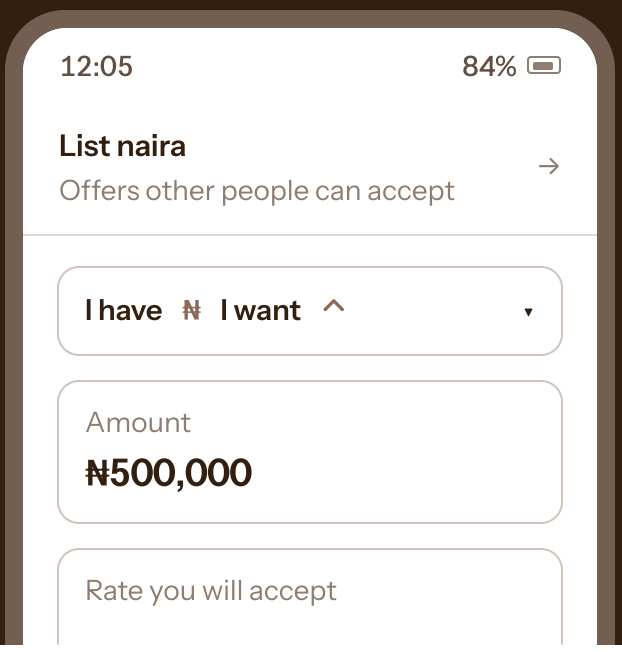

Ama has naira. She needs cedi, not naira.

She is not a company and does not want to be one. She lists what she holds, sets the rate she will accept, and waits. **KudiMarket sits in the middle of the board at a rate we can honour ourselves**, which is why she never has to find a counterparty before she can trade.

1. **Your position**

2. **Set an offer**

1 ₦ = 0.00675 ^

KudiMarket buys naira from you at this rate and pays cedi to whoever you send it to, or straight into your cedi account.

Settled trades	31
Disputes on your trades	0
Average settle time	4 min

List naira | History

1 ₦ = 0.00670 ^

AGAINST THE BOARD

That is **0.7% below** KudiMarket's rate. You are very likely to wait longer. Listings closer to our rate clear first.

Deposit if a trade is disputed	₦0
Deposit if you take the other side	₦50,000

A deposit only applies when you are trading with another vendor and you are judged at fault. Trading against KudiMarket needs no deposit from you.

Trade #4821
₦200,000 → ^1,349.53

• Waiting

State	Ama said she paid
KudiMarket	Checking the naira arrived
You can release	12:19

07:12

Paid by Mobile money

Settles Into your cedi account

Counterparty fee ₦0

01:47 Left to accept. After that the rate is re-checked, because these move.

Accept Decline

Naira must sit still for this long before you can release. Mobile money reverses fast, so the wait is the protection, not a formality.

WHY YOU CANNOT RELEASE YET

The claim window has not closed. Releasing early is what makes a platform lose money to a reversal, so the system refuses it rather than trusting you to remember.

Release to Ama Opens at 12:19

Message Ama

THE BUYER

Ama has cedi. She needs naira, sent to Lagos.

She came for one number and left knowing who is standing behind it. That is the whole product: not a better rate, but a rate with a name on it.

WHAT BOTH SIDES END UP WITH

A record that cannot be edited afterwards.

This is the same trade after a dispute, on both phones. Neither side wrote it, and neither side can change it. Every line commits to the one above it, so a row that was edited or quietly deleted is

detectable by anyone who asks.

Trade #4821

^1,349.53 → ₦200,000 · Ama → Adwoa · vendor_vendor

Resolved, refund · Both chains verified

#	CHANGE	BY	WHY	WHEN
1	**no state yet** → **open**	KudiMarket	Trade opened. Written by the ledger itself, not by a screen.	11:58:02
2	**open** → **paid claimed**	Ama	Seller said she sent the cedi.	12:00:41
3	**paid claimed** → **paid attested**	KudiMarket	Cedi confirmed in KudiMarket's MoMo account.	12:01:09
4	**paid attested** → **disputed**	Ama	"The naira has not arrived at all."	12:07:55
5	**disputed** → **resolved refund**	ops@kudimarket.com	Seller made whole. Buyer at fault, so the buyer's ^135 deposit was forfeited to the seller.	12:26:18

- Pending or awaiting someone
- Confirmed against evidence we hold
- Money went back to one side

The page a regulator looks at calls this out loud: if any line above has been changed, both hash chains stop verifying and the console says STOP instead of rendering a page that looks fine.

Two colours do the work. Anything waiting on a human is umber, which is also every action you can take. Green only ever means confirmed, so it cannot be mistaken for a button. Red only ever means money went back to one side, so it cannot be mistaken for ordinary emphasis. There is no fourth colour.
